Art Unit: 2837

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: the numerals 100, 102, 104, 106, 108, 112, 1a, 9a, 9b, 10b, 11b, 9c, 10c, 11c, 9d, 10d, 11d, and 43 described in the specification are not in the drawing. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to because there are two numerals 35 in Fig. 3 indicating different elements. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

3. The disclosure is objected to because of the following informalities:  
numeral 41 is used for connector on page 5, and in Fig. 1 but is also used for annular channels 41-44 on page 9;  
three lines from the bottom of the page 6, cap 2 should be cap 3.  
Appropriate correction is required.

4. Claims 1-17 are allowed.

Art Unit: 2837

5. The claims are allowable over the prior art for at least the reason that the prior art fails to reasonably teach or suggest in claims 1 and 2 that a silencer comprising a plurality of axially spaced annular noise attenuating baffles, each baffle having an inner circumference defining a central aperture, the central apertures of each baffle collectively defining an axial outlet flow passage to said outlet aperture; the baffles defining a series of axially spaced generally annular partial flow passages such that air flowing through said silencer is initially split between said flow passages and then merges into the axial outlet passage as set forth in the claimed combination.
